

About Shanghai Re-poly Environmental Protection Technology Co., Ltd.

We have always been actively promoting technology and product innovation and upgrading in the industry, continuously exporting practical experience in professional fields, providing cleaner and safer recycled plastic solutions for global brands, and helping China's plastic recycling industry and enterprises to achieve sustainable commitments and goals. Over the years, we deep cultivation in the industry has been recognized at home and abroad, which reflects its leading role in social influence and social responsibility.

- SCIP+ Green Chemical Innovation Entrepreneurship Competition, First Prize, 2020
- Meituan Greentech Environmental Protection Science and Technology Innovation Demonstration Project, 2021
- The United Nations Development Program (UNDP) Sustainable Development Innovation Demonstration Projects - INSPIRO Fellowship, 2021
- 2022 Green Sustainable Practices, China - Green Technology, 2022
- APEC 2022 "Sustainable Consumption and Production," Growth Case, 2022
- Global Carbon Neutral Field Pioneer Enterprise of Science and Technology, Pioneer Award & Entry Prize, 2022

Our independent research and development of regenerative pp production line has obtained the rare FDA No Objection Letter (NOL) in the field of regenerated plastics. It has the ability to provide cleaner and safer food-grade recycled materials for global partners, helping to enhance the international demonstration effect and influence of China's plastic recycling enterprises.

We accumulated strength and responsibility in the practice of the full cycle industry chain of food-grade plastics. It will effectively help China's food-grade recycled plastics to open a new situation in the closed-loop packaging and more high value fields. Then

It will promote the process of waste plastic treatment and environmental protection, and contribute to the early realization of the double carbon goal.
